DETAILED ACTION

Allowable Subject Matter

1. Claims 1-6, 8, 10-15, 17, 19-24, and 26 are allowed over prior art of record.

The following is an examiner's statement of reasons for allowance: Swaminathan et al. (US 5704000) disclose a pitch estimating method includes the steps of determining a set of pitch candidates to estimate a pitch of a digitized speech signal at each of a plurality of time instants, wherein series of these time instants define segments of the digitized speech signal; constructing a pitch contour using a pitch candidate selected from each of the sets of pitch candidates determined in the first step; and selecting a representative pitch estimate for the digitized speech signal segment from the set of pitch candidates comprising the pitch contour (*The operation of figures 2 and 5-6*). Swaminathan et al. fail to specifically disclose the steps of: identifying the initial set of pitch value candidates within each frame comprises: passing each frame of audio content through an average magnitude difference function (AMDF); and selecting N near-zero minimum pitch values in the audio content as the initial set of pitch value candidates; identifying a select set of pitch values comprises: generating a local score for each of the initial set of pitch value candidates utilizing a normalized cross-correlation function (NCCP); and selecting M pitch value candidates with the highest local score. Furthermore, it would have not been obvious to one of ordinary skill in the art at the time of invention to modify Swaminathan et al. to realize the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
